

Weekly Report

Period: 28/02/16 - 06/03/16

Reporter: Li Zongzhuang

1 Last Week

1. I learned Java with the help of Lin Ming as last year I did. From the learning of Java, My thinking is different from before when I like to think in a mathematical thinking. Now I began to think in a simple way. I will reduce the use of loop statement and debug in a more simple way.
2. I learned the SANDVis the week before last week. It's a set of systems that mine, aggregate, and infer a social graph from social media inside an enterprise, resulting in over 73 million relationships between 450,000 people. There are two papers for this system. The last one is a complement for the first one in user's analysis. The next is the link address of my learning note of the System.

After a discussion with Lin Ming, I learned more from the papers. Like the organization of the papers. The emphasis of its innovation. And the users' analysis they did was very interesting and really completed the first paper. That's why they can submit second paper just by the users' analysis.
3. I read several papers about the visualization analysis tools. I have began write the outline of the file overview of visualization analysis tools.

2 Next Week

Next week I will be going to learn Java by doing the coding practice. And I will try to complete the outline of my file overview.
